## Work Experience

### PickmeUp Services

#### Frontend Developer

- I participated in designing and implementing APIs for a staff application table which contains name, phone number, address, points and action using React. The table includes an action column with three submenu options: add points, view profile, and delete staff. Each submenu option is associated with a modal that serves different purposes, and endpoints were consumed for each.
- I contributed to designing and implementing API consumption within the 'Add Points' modal of the staff application table. This involved sending a POST request to the backend, adding the given points to the staff member in the table, and updating the table accordingly.
- I contributed to designing and implementing API consumption (GET Request) for a staff profile form within the action column of the staff application. The form displays non-editable information such as name, address, status, role in the company, age, and guarantor details, retrieved from the backend for each staff member

### Prunedge

#### Frontend Developer

- Managed and updated existing applications while ensuring compatibility with various devices through responsive design.
- Enhanced website speed and efficiency through image optimization and code restructuring.
- Improved collaboration and workflow efficiency by leveraging Git for version control and maintaining repositories on GitHub

### Arteria

#### Frontend Intern

- Collaborated closely with product designer, implementing accurate UI/UX using Bootstrap and replicating Figma design, resulting in visually appealing and user-friendly web experiences.
- Became proficient in HTML, CSS, and JavaScript, crafting high-caliber code for various projects, such as designing a personal portfolio website and building multiple fully operational front-end web applications.

## Kodecamp

### Frontend Intern

- Worked closely with backend teams to seamlessly integrate frontend elements with RESTful APIs, facilitating smooth data transmission and real-time content updates.
- Acquired expertise in React JS and TypeScript through practical projects and mentorship.
- Collaborated with senior developers to build a brand-new website from the ground up, employing React and Tailwind CSS.

## SideHustle Internship

### Frontend Intern

- Enhanced productivity and effectiveness by acquiring and implementing new skills in daily web development workflows.
- Converted Figma design mockups into precise, high-quality HTML and CSS code.
- Worked closely with fellow interns to streamline web development processes.
- Started my coding journey, developing fundamental programming skills.

## Education

### Federal University Of Agriculture, Abeokuta

Physics , Bachelor of Science

## Skills
